Sensitivity runs of start R, one run each (not among the nine; in no count of rule 3)
R1, zinc set 2s
CONVERTED
R1, candidate N2 terms
MIXED
time (ns); 0 = start of the production
ligand heavy atoms against the crystal pose (6RL9), after the fit of the Cα atoms
2.0 Å (rule 1 reads the mean of the last half of a crystal-start run)
pale: every frame (10 ps)
strong: mean over 1 ns (production)
grey strip: equilibration after the release of the ligand (−1.3 to 0 ns, stretched; every frame)
ends of stages 4 and 5 (400 and 800 ps after the release; backbone held in stages 4 and 5, free in stage 6)
conversion by the plan's rule: first frame of the first visit of at least 1 ns in the opposite state
the same frame in a run whose verdict is MIXED: not a conversion
