R1, candidate N2 terms
MIXED
distance (Å)
time (ns); 0 = start of the production
Sensitivity runs of start R, one run each (not among the nine; in no count of rule 3)
d1: aniline N1 to Phe131 CZ
d2: aniline N1 to Asn67 OD1
midpoint of d1, 6.7 Å
midpoint of d2, 5.2 Å
pale: every frame (10 ps)
strong: mean over 1 ns (production)
grey strip: equilibration after the release of the ligand (−1.3 to 0 ns, stretched; every frame)
ends of stages 4 and 5 (400 and 800 ps after the release; backbone held in stages 4 and 5, free in stage 6)
conversion by the plan's rule: first frame of the first visit of at least 1 ns in the opposite state
the same frame in a run whose verdict is MIXED: not a conversion
